OBJECT ORIENTED PROGRAMMING

MSS Cinema ONLINE TICKET SYSTEM

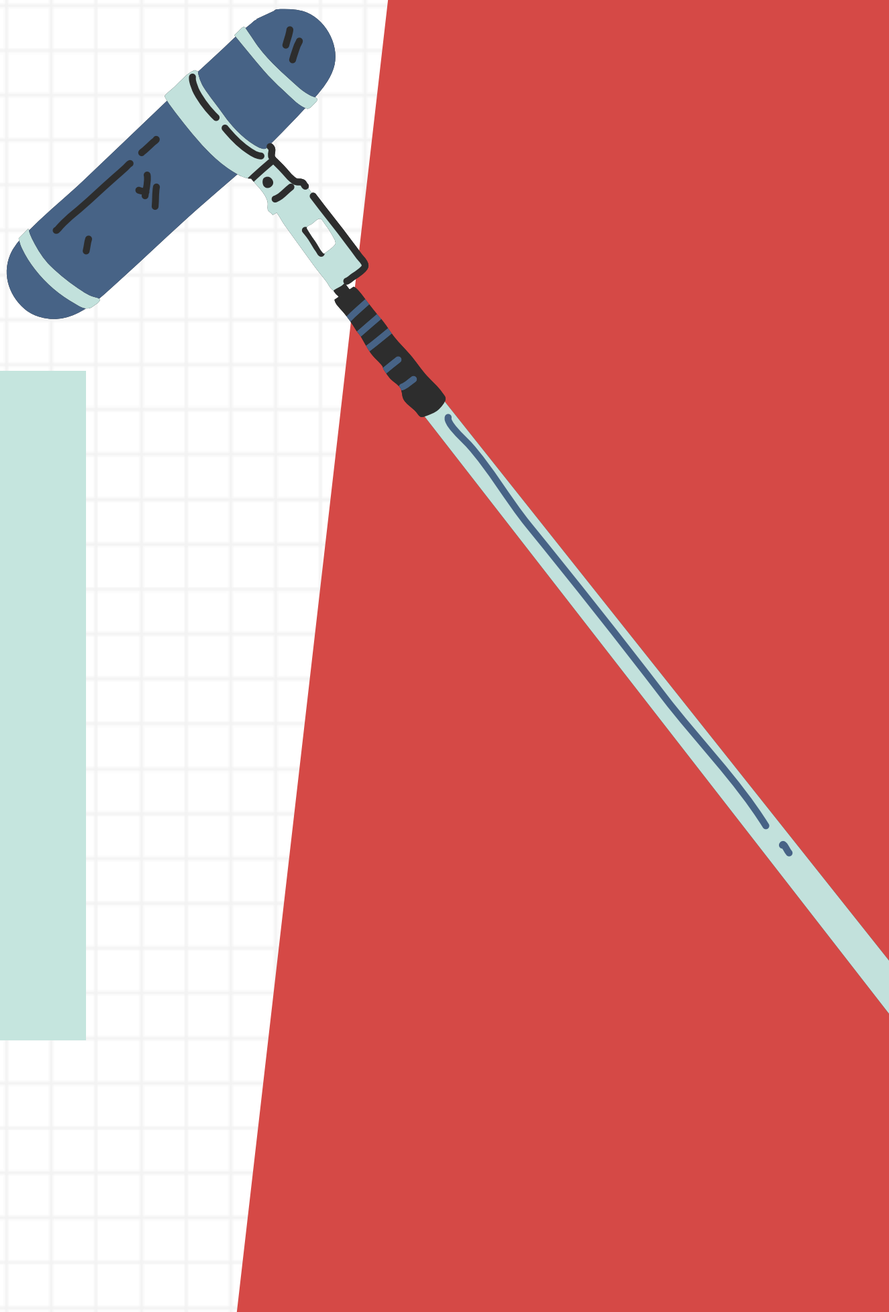

Group members:

1)Nur Hamizah Amnani

2)Muhammad Syahmi

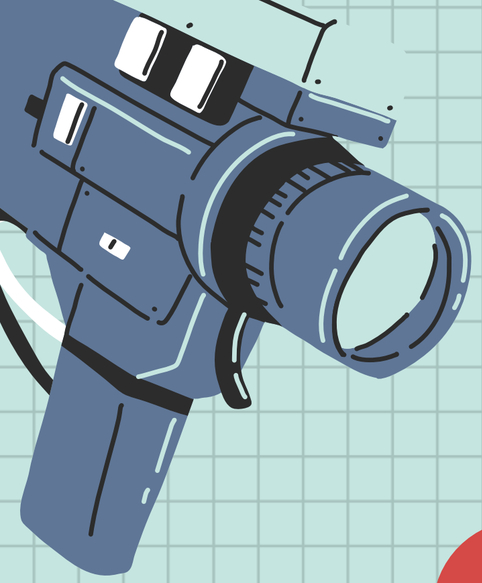

3)Nik Nabila Sofia

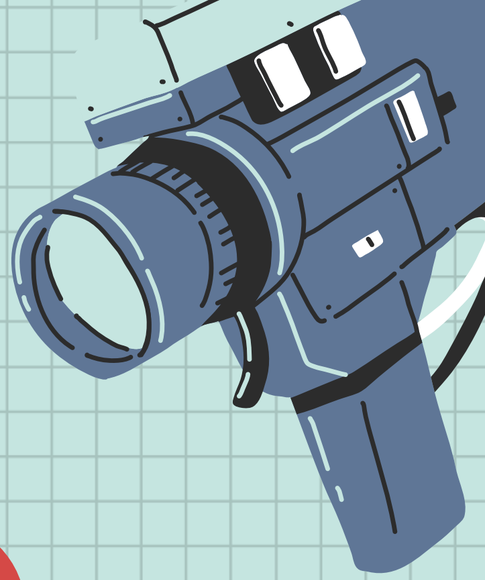

Introduction:

Nowadays, almost everything is running in an online system or can be considered as a new norm where we do everything online. This is because it is easier for us humans to do work or any task easily anywhere and anytime.

Buying the movie ticket online would be so much faster and time saving rather than going to the cinema and buying the tickets there. This is the reason we made a system that serves the same purpose as the real online movie ticketing system.

Objectives:

1

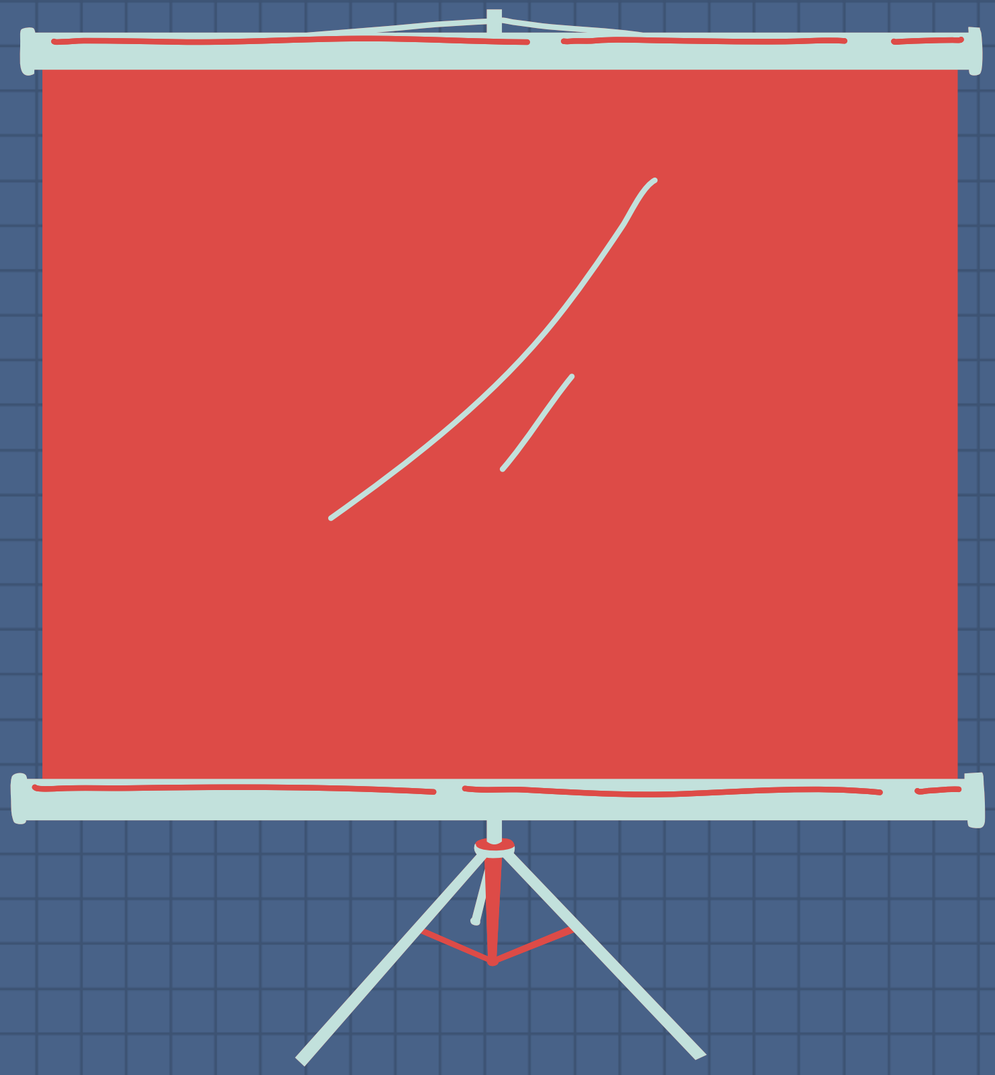

To reduce the time to buy movie ticket because customers don't have to queue at the counter

2

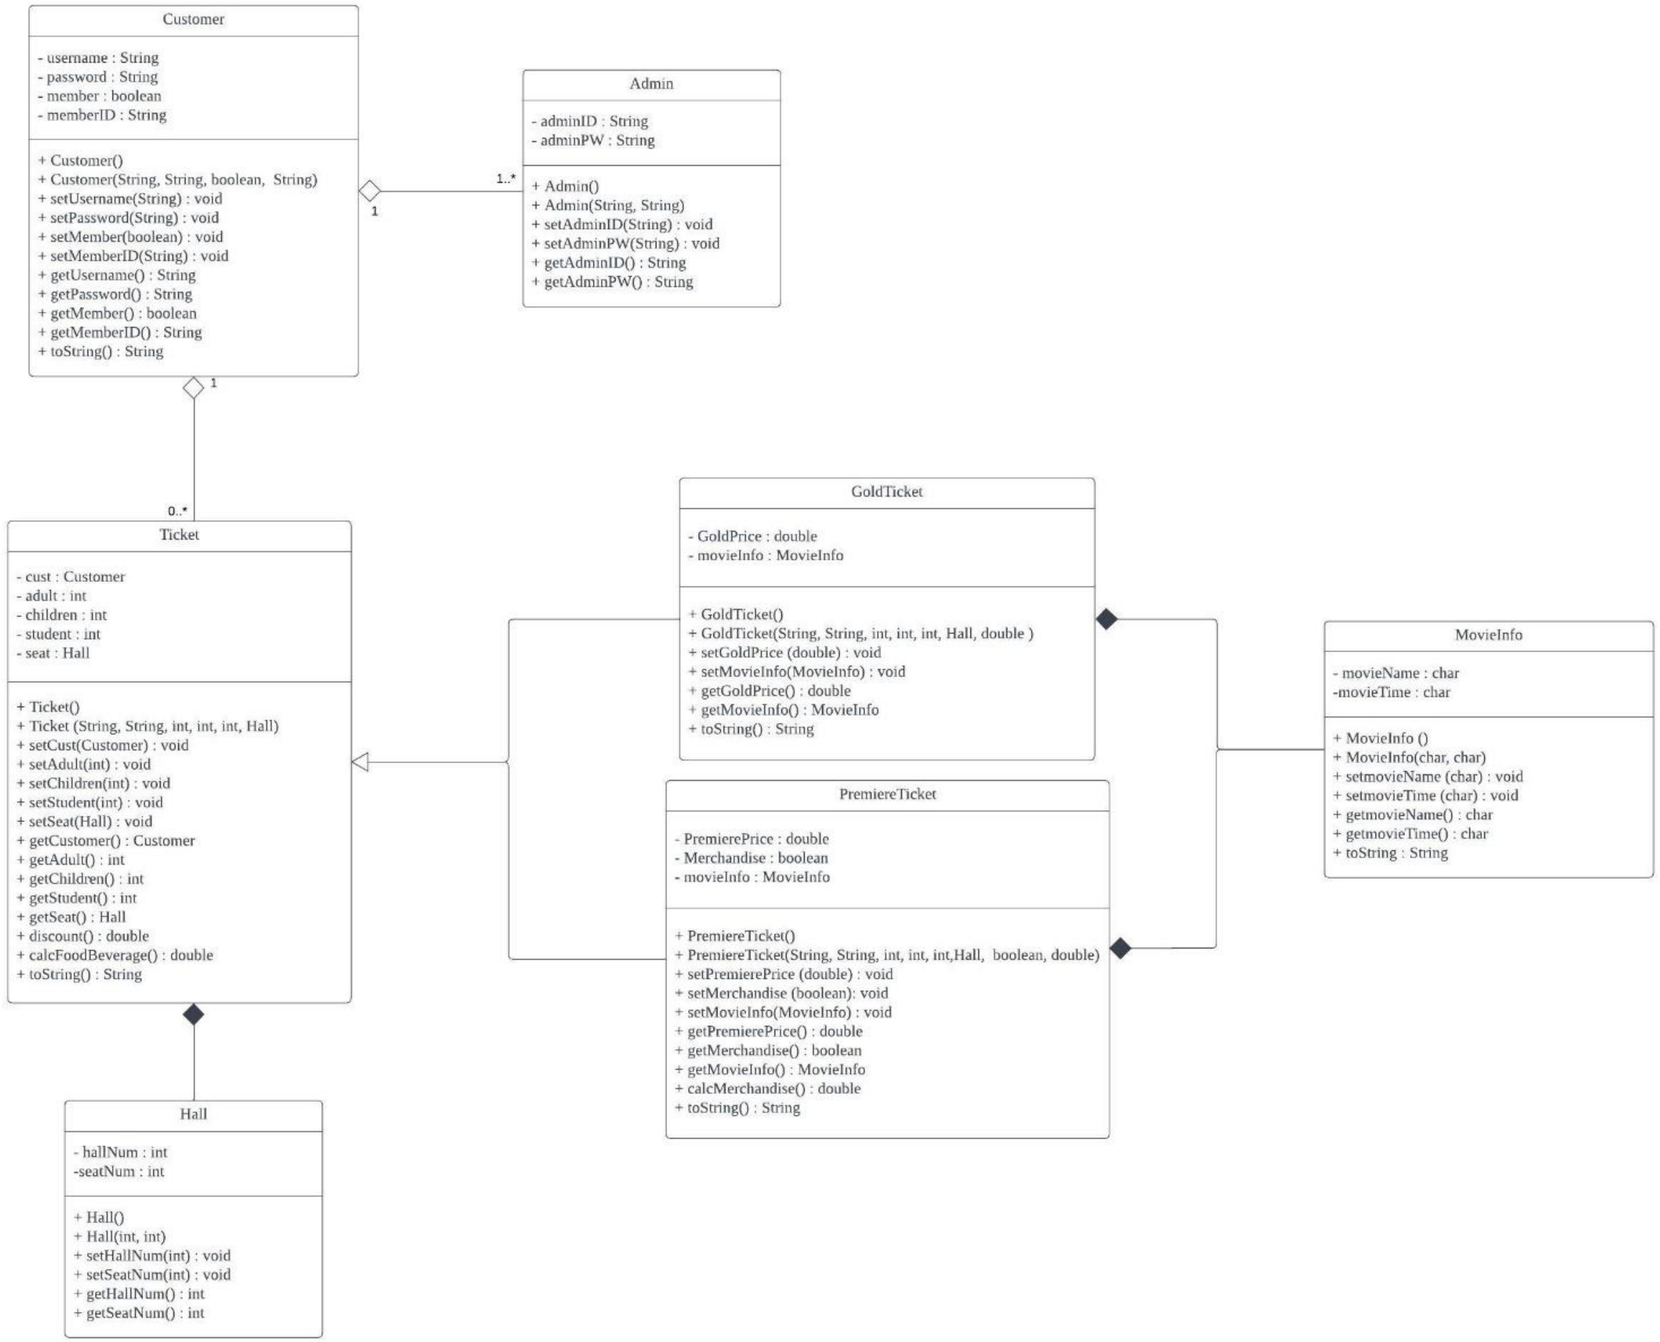

To make it easier for customers because they can buy the ticket anywhere anytime

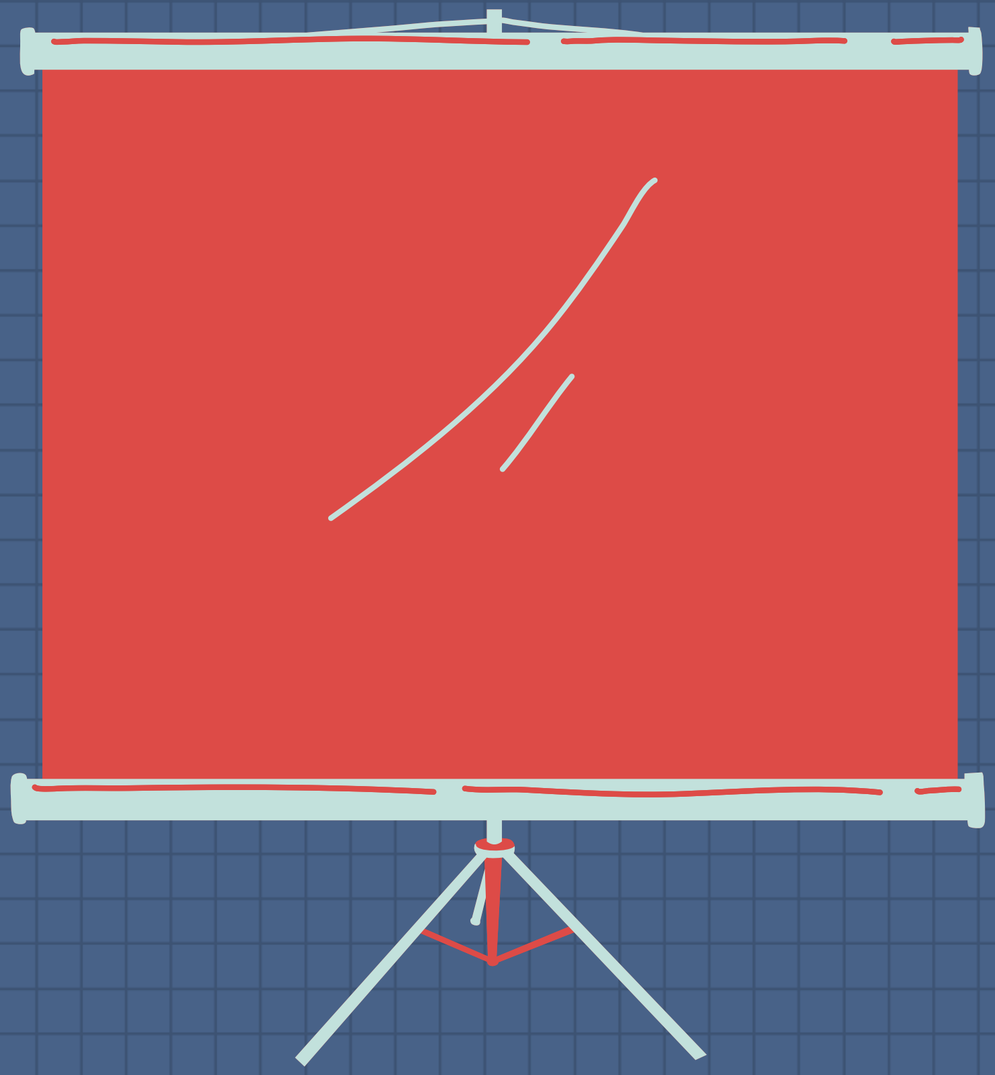

3

To achieve a convenient way of managing customer details and creating a user friendly environment

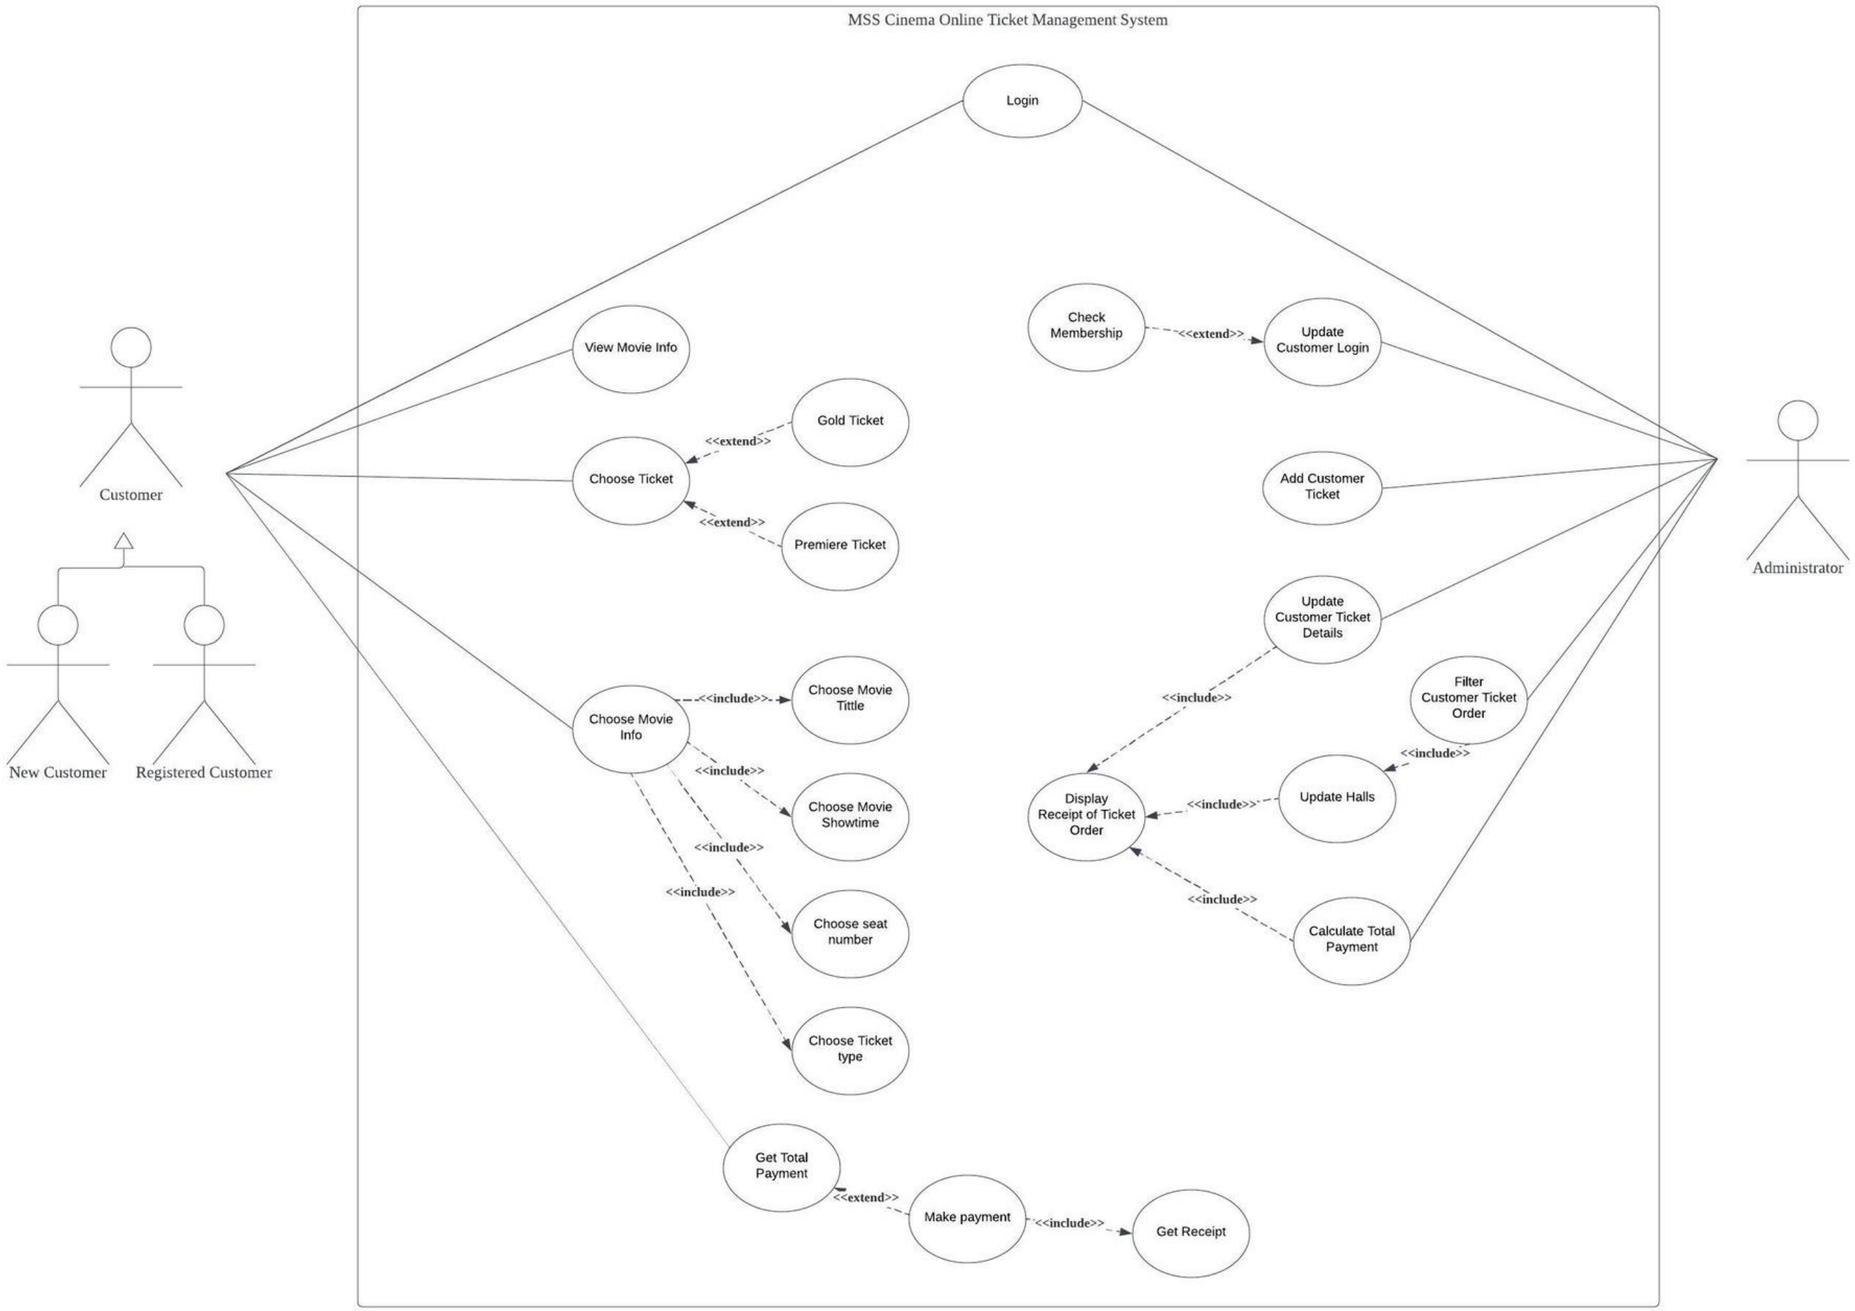

UML diagram:

Customer
- username : String
- password : String
- member : boolean
- memberID : String
+ Customer()
+ Customer(String, String, boolean, String)
+ setUsername(String) : void
+ setPassword(String) : void
+ setMember(boolean) : void
+ setMemberID(String) : void
+ getUsername() : String
+ getPassword() : String
+ getMember() : boolean
+ getMemberID() : String
+ toString() : String
Admin
- adminID : String
- adminPW : String
+ Admin()
+ Admin(String, String)
+ setAdminID(String) : void
+ setAdminPW(String) : void
+ getAdminID() : String
+ getAdminPW() : String
1..*

0..*
Ticket
- cust : Customer
- adult : int
- children : int
- student : int
- seat : Hall
+ Ticket()
+ Ticket (String, String, int, int, int, Hall)
+ setCust(Customer) : void
+ setAdult(int) : void
+ setChildren(int) : void
+ setStudent(int) : void
+ setSeat(Hall) : void
+ getCustomer() : Customer
+ getAdult() : int
+ getChildren() : int
+ getStudent() : int
+ getSeat() : Hall
+ discount() : double
+ calcFoodBeverage() : double
+ toString() : String
GoldTicket
- GoldPrice : double
- movieInfo : MovieInfo
+ GoldTicket()
+ GoldTicket(String, String, int, int, int, Hall, double)
+ setGoldPrice (double) : void
+ setMovieInfo(MovieInfo) : void
+ getGoldPrice() : double
+ getMovieInfo() : MovieInfo
+ toString() : String
PremiereTicket
- PremierePrice : double
- Merchandise : boolean
- movieInfo : MovieInfo
+ PremiereTicket()
+ PremiereTicket(String, String, int, int, int,Hall, boolean, double)
+ setPremierePrice (double) : void
+ setMerchandise (boolean): void
+ setMovieInfo(MovieInfo) : void
+ getPremierePrice() : double
+ getMerchandise() : boolean
+ getMovieInfo() : MovieInfo
+ calcMerchandise() : double
+ toString() : String
MovieInfo
- movieName : char
-movieTime : char
+ MovieInfo ()
+ MovieInfo(char, char)
+ setmovieName (char) : void
+ setmovieTime (char) : void
+ getmovieName() : char
+ getmovieTime() : char
+ toString : String
Hall
- hallNum : int
-seatNum : int
+ Hall()
+ Hall(int, int)
+ setHallNum(int) : void
+ setSeatNum(int) : void
+ getHallNum() : int
+ getSeatNum() : int
